RESEARCH EXPERIENCE

Numerical Simulation of Plasma Equilibrium Evolution in Nuclear Fusion

Hefei, China

Supervised by Prof. Mengping Zhang at USTC

Jun. 2021 -- May. 2022

- Developed a parallel hybrid finite difference-pseudo spectral code for resistive MHD in toroidal geometry
- Performed long-time simulation of resistive tearing mode instability in tokamaks, with a focus on the logarithmic growth rate of kinetic energy, mode structure, and three distinct evolution stages
- Checked the results with researchers from the Institute of Plasma Physics, Chinese Academy of Science, and against those from existing open-source codes
- Discussed the methodology and results with Prof. Chi-Wang Shu from Brown University
- Surveyed and implemented DG schemes for controlling divergence of the magnetic field in ideal MHD

Positivity-Preserving Conservative Low Rank Methods for Vlasov Dynamics

Online

Supervised by Prof. Xiangxiong Zhang at Purdue University

June. 2022 -- Aug. 2022

- Developed a low-rank correction algorithm with positivity preservation and orthogonality constraints via optimization
- Used the algorithm to post-process the data generated from the dynamic low-rank solver

TEACHING EXPERIENCE

- TA, Computational Methods B, USTC (instructor: Prof. Jingrun Chen) 2022 Spring
