## RESEARCH EXPERIENCE

Numerical Simulation of Plasma Equilibrium Evolution in Nuclear Fusion

Hefei, China

Supervised by Professor Mengping Zhang and Yan Jiang at USTC

Jun. 2021 - May. 2022

- Developed a parallel hybrid finite difference-pseudo spectral code for RMHD in toroidal geometry
- Performed long-time simulation of resistive tearing mode instability in Tokamak, with a focus on the logarithmic growth rate of kinetic energy, mode structure, and three distinct evolution stages
- Checked the results with researchers from the Institute of Plasma Physics, Chinese Academy of Science, and against results from existing open-source code
- Discussed the methodology and results with Prof. Chi-Wang Shu from Brown University
- Surveyed and implemented DG schemes for controlling global divergence of the magnetic field in ideal MHD

Positivity-Preserving Conservative Low Rank Methods for Vlasov Dynamics

Online

Supervised by Professor Xiangxiong Zhang at Purdue University

June. 2022 - Aug. 2022

- Developed a low rank approximation algorithm with positivity preservation and orthogonality constraints via optimization
- Use the algorithm for cost-efficient Vlasov dynamics simulation
