#### RESEARCH EXPERIENCES

# Numerical Simulation of Plasma Equilibrium Evolution in Nuclear Fusion

Supervisor: Prof. Mengping Zhang USTC undergraduate research project, 06/2021–05/2022

- Developed a parallel hybrid finite difference-pseudo spectral code for resistive MHD in toroidal geometry, and performed long-time simulation of resistive tearing mode instability in tokamaks
- Checked the results with researchers from the Institute of Plasma Physics, CAS, and against those from existing open-source codes
- Discussed the methodology and results with Prof. Chi-Wang Shu

# Positivity-Preserving Conservative Low Rank Methods for Vlasov Dynamics

Supervisor: Prof. Xiangxiong Zhang Purdue University

Purdue University (remote), 06/2022–08/2022

• Developed a low-rank correction algorithm with positivity preservation and orthogonality constraints via optimization, which can post-process data from a dynamic low-rank solver

# Discontinuous Galerkin Methods for the p-Laplacian Equation

Supervisor: Prof. Yan Xu

Bachelor's thesis at USTC, 12/2022-06/2023

- Proved an a priori error estimate for an LDG scheme for the p-Laplacian equation
- Developed and implemented an efficient preconditioned gradient descent method
